Bred for Texas climate  
by Eddie Fanick

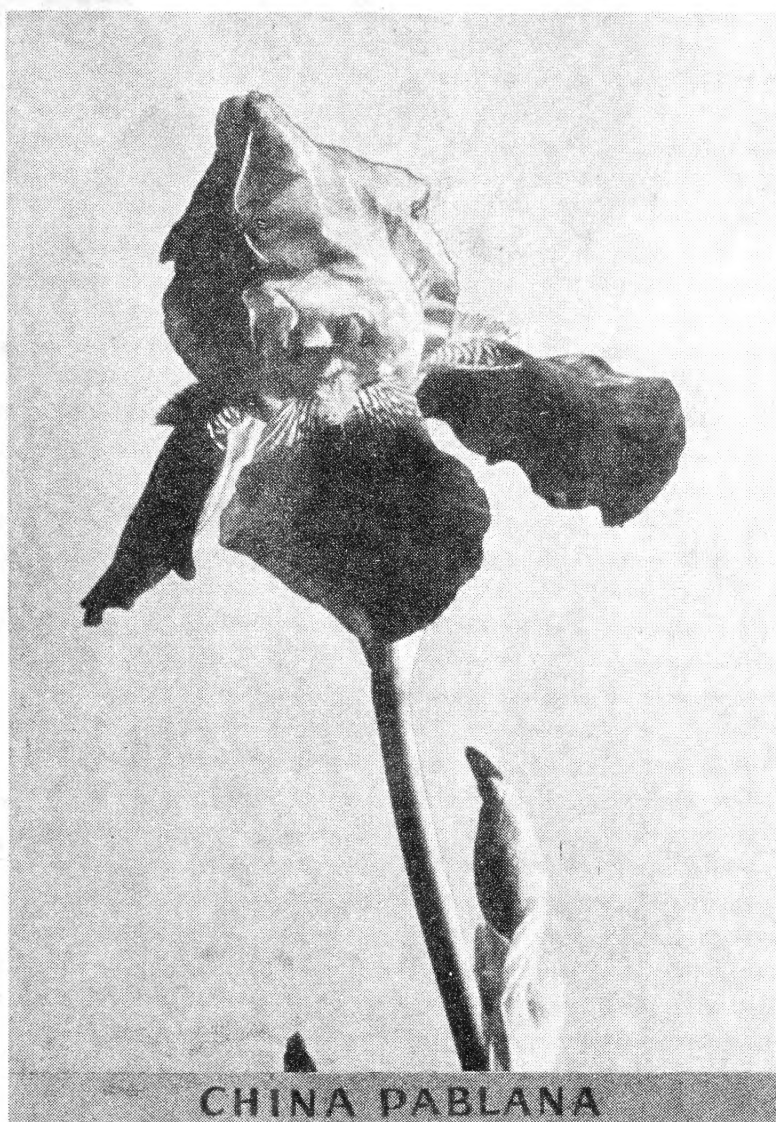

Greetings; Texans and Irisians  
the world over.

I take pleasure to introduce Iris bred for our difficult Iris climate. Why? because we here have not been able to enjoy all the lovely varieties that grow and bloom in more favored Iris climates, many of us have brought these lovely creations into our gardens only to find them unhappy, sulking and eventually dying, others have bloomed too well and had not the strength to perpetuate themselves, a few do very well, and give us much pleasure each year. Noting this I set out in the early 30's to cross those that liked our conditions with those of equal vigor, and later the weak with the strong varieties, thousands of seedlings were grown, those with desirable traits and strength were saved, these I grew for years in all types of abuse and conditions, those that made the grade and bloomed each year were carried to my garden for future release if they remained good behaving children. This year I am releasing 12 varieties of the lot that may be released in the future. These have a good range of color and types, I have placed them into 4 classes, The Formal Iris is the type that you would like to display as specimen, Landscape Iris for general widespread plantings, Table Iris those colorful dainty small flowered for table or floral arrangements, Early Iris which come into bloom just after our Albicans. I believe these Iris will perform for you as they have for me.

Rainbow of color to you.

Eddie Fanick

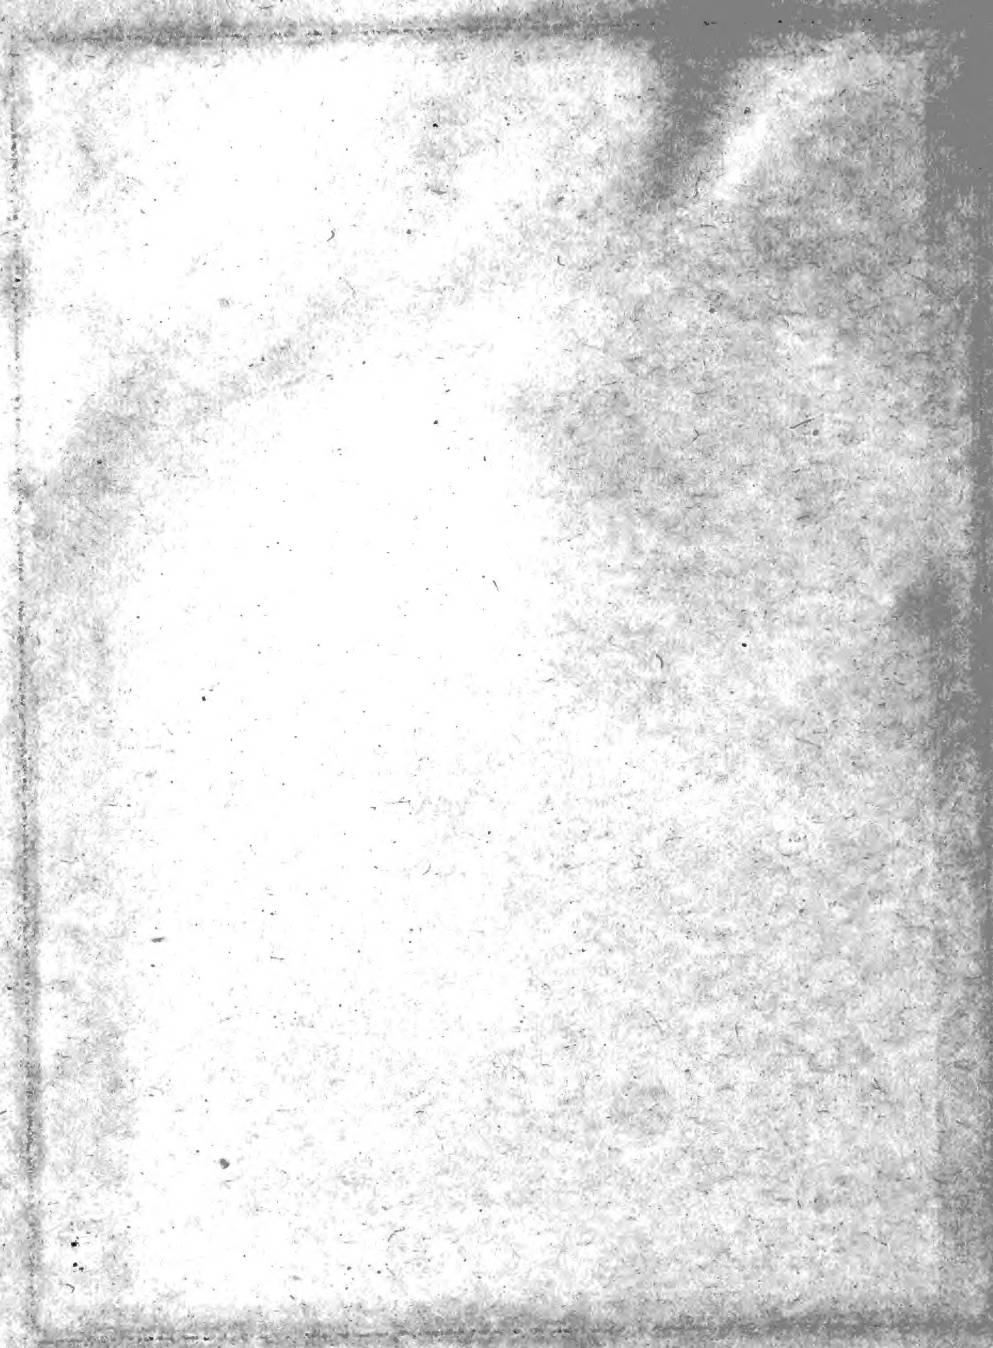

Texas      Formal      Iris      36 inch

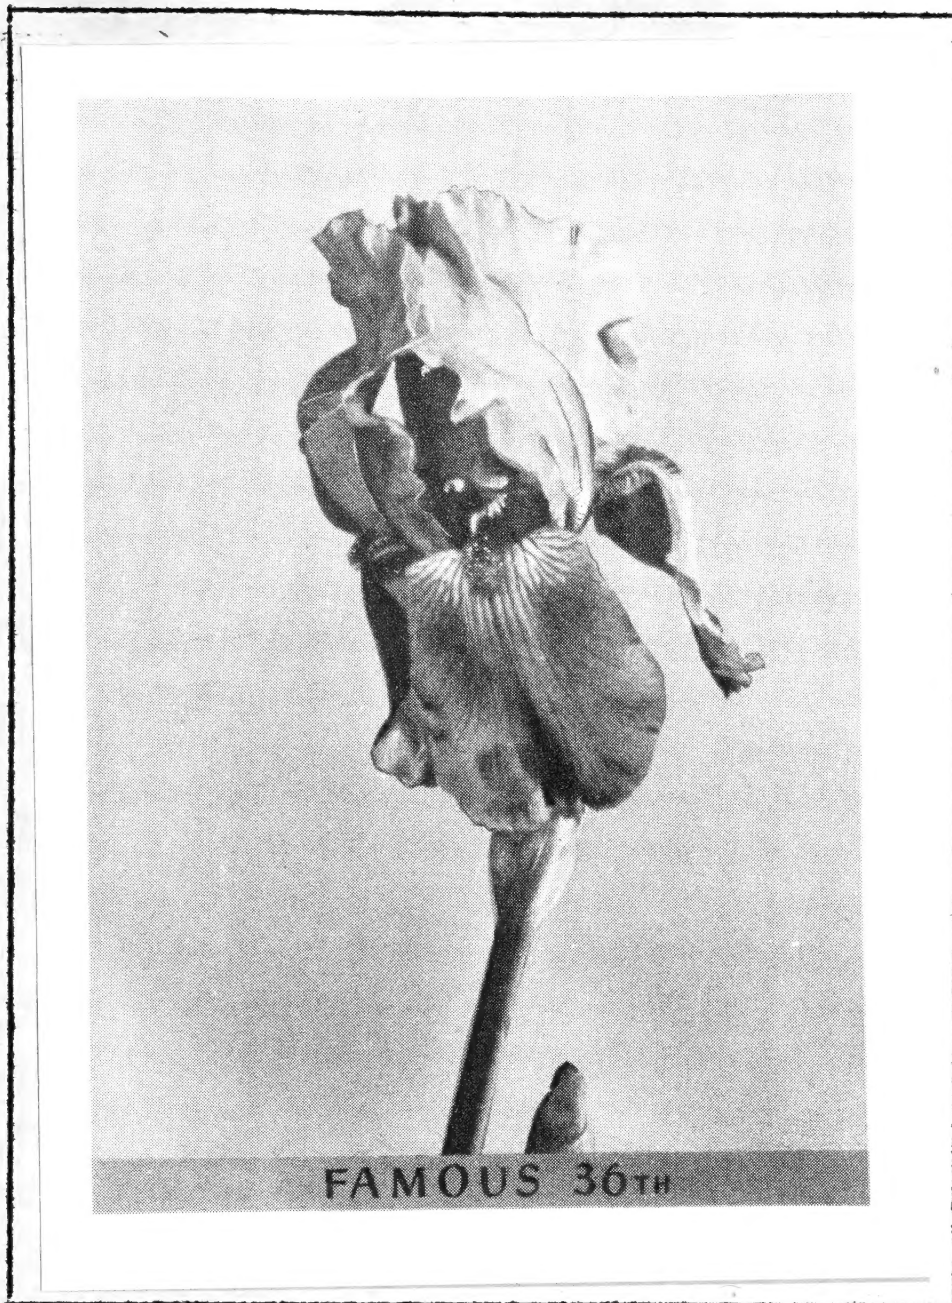

CHINA PABLANA: Large flower variegata effect, standards are bright gold, lightly flushed red, fading to bright golden yellow, falls flaring bright Maroon red, lightened by gold beard and gold flush at base, heavy substance, brightest Iris in the garden, heavy low branched stalk bears 8 blossoms, clean foliage, and prolific bloomer, has long season, often re-blooms in the fall. We don't have many in this color class that do well in our climate.

Texas      Formal      Iris      50      inches

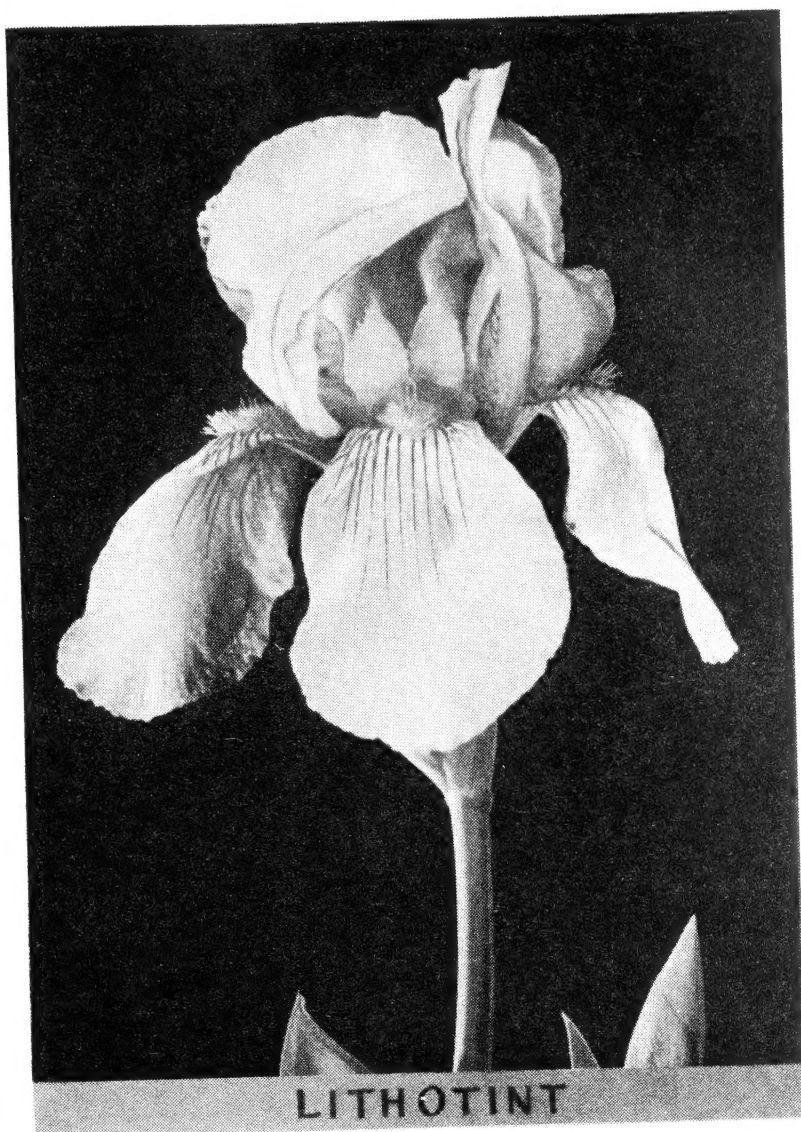

FAMOUS 36th; Large clear Lilac Blue self, standards are domed and ruffled, falls semi-flaring and wavey, old Gold beard and a small white area near the beard lighten the blossom, substance very good, holds it's color well in our bright sunshine, Hyacinth fragrance, heavy stalk bearing 8 blossoms, massive foliage, makes this Iris desirable. Named for the famous 36th division Texas National Guard. Prolific grower, dependable bloomer.

Price \$ 5.00 Each

The first thing I noticed when I stepped  
 out of the car was the smell of the  
 sea. It was a fresh, salty breeze that  
 hit me in the face. I had never  
 smelled anything like it before. I  
 took a deep breath and felt a sense  
 of peace wash over me. The sun was  
 shining brightly, and the water was  
 a beautiful blue. I had found a  
 perfect spot to relax and enjoy the  
 view. I had come to the right place.  
 I had found my paradise.

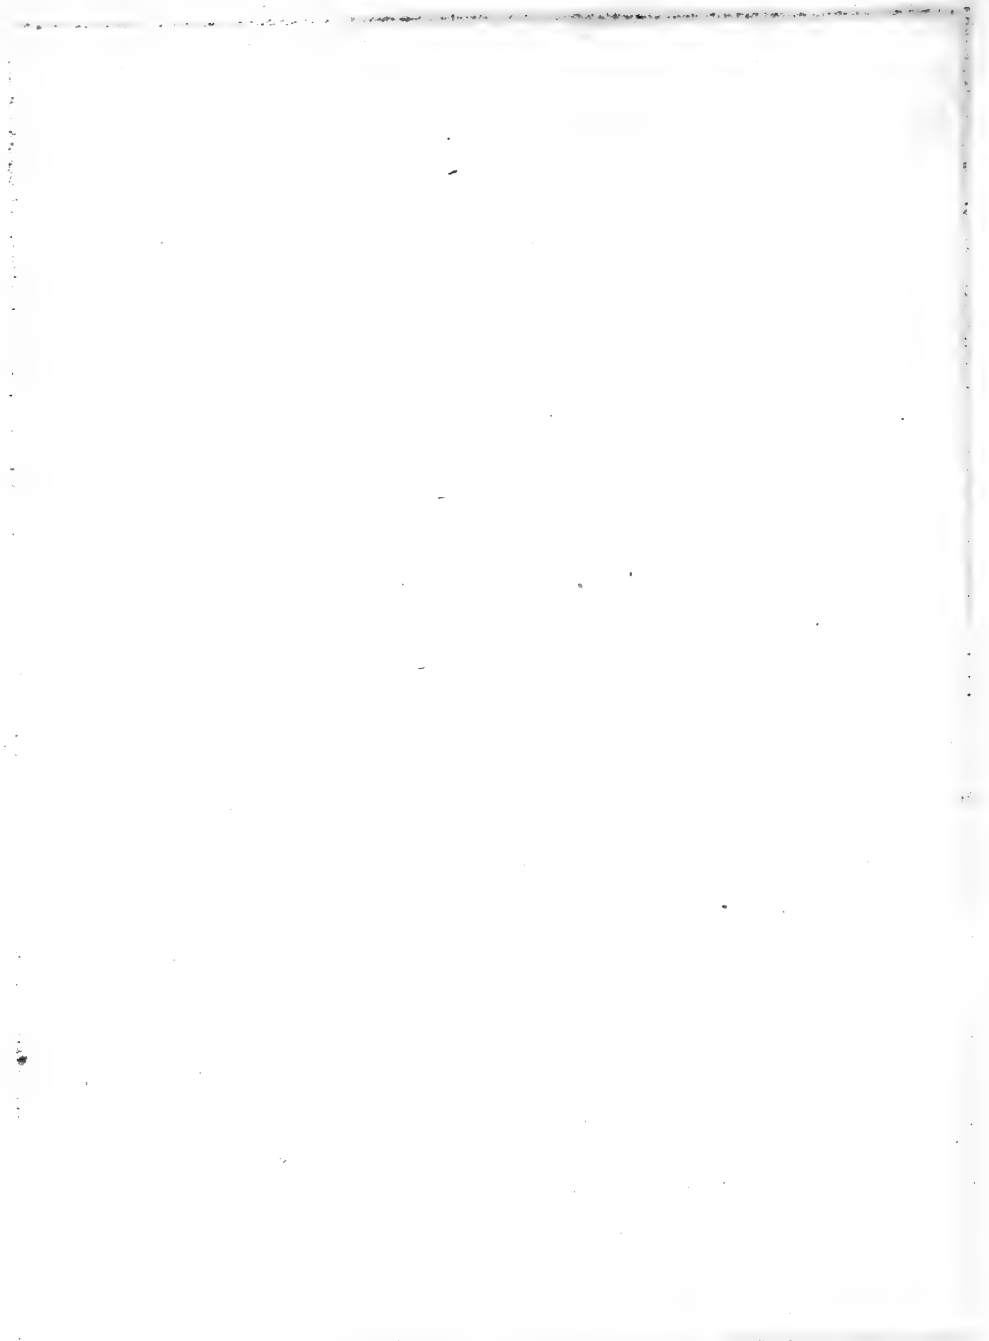

Figure 1. Schematic diagram of the experimental setup.

The experimental setup consists of a laser source, a beam splitter, a lens, a sample, and a detector. The laser source emits a beam of light that passes through a beam splitter. The beam splitter divides the beam into two paths. One path goes through a lens and then through a sample. The other path goes through a lens and then through a detector. The detector measures the intensity of the light that passes through the sample. The intensity of the light that passes through the sample is compared to the intensity of the light that passes through the beam splitter. The ratio of the two intensities is called the transmission coefficient. The transmission coefficient is a measure of the amount of light that passes through the sample. The transmission coefficient is used to determine the properties of the sample.

Figure 1. Schematic diagram of the experimental setup.

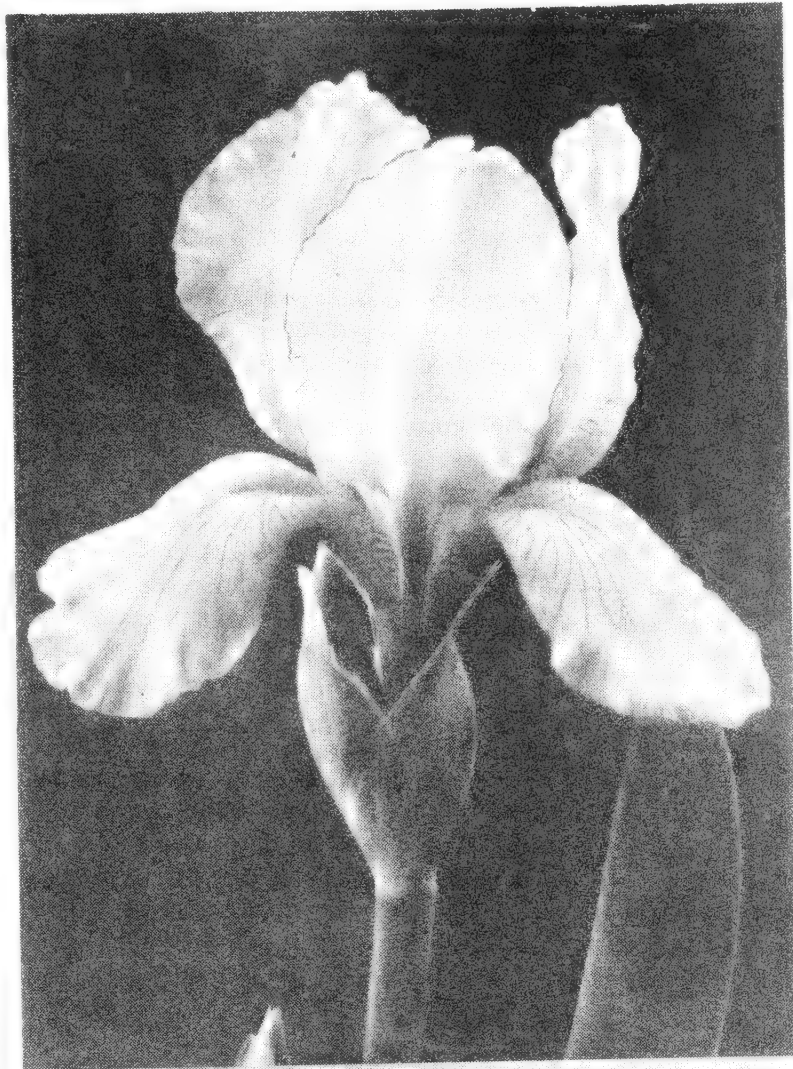

Texas Landscape Iris 30 inch

TEXAS SKIES: Frosted Violet Blue of medium shade domed standards, falls are deep Violet Blue of satiny finish, lightened by the Yellow beard, wide flaring falls of good substance, stiff stalk medium branched, bearing 5 blossoms, clean lush foliage, prolific grower and bloomer, named for the Texas blue skies and the dark blue of the horizons, has Raspberry fragrance.
